Dear parents and students,

In previous years I used to use excel to create my grades.   I kept the numerical records in a grade binder, created an excel file for each class, and then an overall excel file linked to the classes files. I would output a pdf of the grades and then upload that pdf file to my website.

That is what would have shown up here after you click the "Grades" link on my website.

However, this year I am very satisfied with the Synergy program that the District has made available for the teachers to use.   The security and integrity of the data has been (in my opinion) more reinforced and enhanced thanks to the continuous and ongoing activities of the tech staff, and the supervisor of the district Tom Minshew's personal efforts to modernize the technology of the district schools.

You can access my grades by going to http://www.juhsd.net   (the website for the Jefferson union high school district) and in the right column you will see "Synergy ParentVue" and "Synergy StudentVue".

Each student has a username and a password that enables the students to log in to the system. Parents were given these items as well. This is why there is two separate access points.

If you have any concerns at all, or would like to communicate with me, please send me and email at gnapol@juhsd.net and I will respond promptly.

Go Tigers!

Gino Napoli.
